

Lab no :6

Task no 1:

Scenario:

You are required to design an Entity-Relationship Diagram (ERD) for the Ziauddin Hospital Management System, including all the entities, attributes, relationships, and their attribute types, such as primary key, composite, multivalued, and derived attributes. The ERD will help in understanding the database structure of the hospital system. Also you have to create scheme of this sql server managemnt studio.

Task no 2:

Select a real-world system of your choice (e.g., school management). • Design an Entity-Relationship Diagram (ERD) showing all entities, attributes, and relationships. • Implement the database schema using SQL, including primary keys, foreign keys, and constraints.
